NEW HORIZON COLLEGE OF ENGINEERING

VISION

To emerge as an institute of eminence in the fields of engineering, technology and management in serving the industry and the nation by empowering students with a high degree of technical, managerial and practical competence.

MISSION

- To strengthen the theoretical, practical and ethical dimensions of the learning process byfostering a culture of research and innovation among faculty members and students
- To encourage long-term interaction between the academia and industry through their involvement in the design of curriculum and its hands-on implementation
- To strengthen and mould students in professional, ethical, social and environmental dimensions by encouraging participation in co-curricular and extracurricular activities

QUALITY POLICY

To provide services of the highest quality both curricular and co-curricular so that our students can integrate their skills and serve the industry and society equally well at the global level

VALUES

- Academic Freedom
- Integrity
- Inclusiveness

- Innovation
- Professionalism
- Social Responsibility

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION

To emerge as a department of eminence in Computer Science and Engineering in serving the Information Technology Industry and the nation by empowering students with a high degree of technical and practical competence.

MISSION

- To strengthen the theoretical and practical aspects of the learning process by strongly encouraging a culture of research, innovation and hands-on learning in Computer Science and Engineering
- To encourage long-term interaction between the department and the IT industry, through the involvement of the IT industry in the design of the curriculum and its hands-on implementation
- To widen the awareness of students in professional, ethical, social and environmental dimensions by encouraging their participation in co-curricular and extracurricular activities

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The Graduate of the program will be able to:

PE01: Develop proficiency as computer scientists with an ability to solve a wide range of computational problems in industry, government, or other work environments.

PE02: Attain the ability to adapt quickly to new environments and technologies, assimilate new information, and work in multi-disciplinary areas with a strong focus on innovation and entrepreneurship.

PE03: Possess the ability to think logically and the capacity to understand technical problems with computational systems.

PE04: Possess the ability to collaborate as team members and team leaders to facilitate cutting- edge technical solutions for computing systems and thereby providing improved functionality.

PEO TO MISSION STATEMENT MAPPING

| Mission Statements | PEO1 | PEO2 | PEO3 | PEO4 |
|---|------|------|------|------|
| To strengthen the theoretical and practical aspects of the learning process by strongly encouraging a culture of research, innovation and hands-on learning in Computer Science and Engineering | 3 | 3 | 3 | 2 |
| To encourage long-term interaction between the department and the IT industry, through the involvement of the IT industry in the design of the curriculum and its hands-on implementation | 3 | 3 | 3 | 2 |
| To widen the awareness of students in professional, ethical, social and environmental dimensions by encouraging their participation in co-curricular and extracurricular activities | 2 | 2 | 2 | 3 |

Correlation: 3 - High, 2 - Medium, 1 - Low

PROGRAM OUTCOMES (POs)

The student will be able to:

PO1: Engineering Knowledge: Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex Computer Science and engineering problems.

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems in Computer Science and Engineering reaching substantiated conclusions girst principles of mathematics, natural sciences and engineering sciences.

PO3: Design / Development of Solutions: Design solutions for complex engineering problems and design system components or processes of Computer Science and Engineering that meet the specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.

PO4: Modern tool usage: Create, select and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities related to Computer Science and Engineering with an understanding of the limitations.

PO5: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO6: Life-Long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

The student will be able to:

PSO1: Ability to design, develop, implement computer programs and use knowledge in various domains to identify research gaps and hence to provide solution to new ideas and innovations.

PSO2: Work with and communicate effectively with professionals in various fields and pursuelifelong professional development in computing.

MAPPING OF PEOs to POs & PSOs

| | | | | PS | SO's | | | |
|------|---|---|---|----|------|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 1 | 2 |
| PEO1 | 3 | 3 | 2 | 2 | 2 | 1 | 1 | 1 |
| PEO2 | 3 | 3 | 3 | 3 | 3 | 2 | 3 | 2 |
| PEO3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 |
| PEO4 | 1 | 1 | 1 | 1 | 1 | 2 | 1 | 1 |

Correlation: 3 - High, 2 - Medium, 1 - Low

NEW HORIZON COLLEGE OF ENGINEERING

Scheme of Teaching and Examinations –2024 M.Tech., COMPUTER SCIENCE AND ENGINEERING

| | | | TOTAL | 13 | 1 | 4 | 2 | 19 | 25 | 350 | 350 | 700 |

Note: During the 1^{st} semester, students should enroll 2 online courses (Minimum) and must finish the courses before 4^{th} semester and the evaluation will take place during the 4^{th} semester.

Legends: BSC- Basic Science Courses, PCC: Professional core. IPCC-Integrated Professional Core Courses, MCC-Mandatory Credit Course, AUD/AEC – Audit Course/Ability

Enhancement Course (A pass in AUD/AEC is mandatory for the award of the degree), PCCL-Professional Core Course lab, L-Lecture, P-Practical, T/SDA-Tutorial / Skill Development Activities (Hours are for Interaction between faculty and students)

Integrated Professional Core Course (IPCC): Integrated Professional Core Course (IPCC): Refers to Professional Theory Core Course Integrated with practical of the same course. The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper.

Audit Courses / Ability Enhancement Courses Suggested by BOS (ONLINE courses):

Audit Courses: These are prerequisite courses suggested by the concerned Board of Studies.

Skill Development Activities: Under Skill development activities in a concerning course, the students should

- Interact with industry (small, medium, and large).
- Involve in research/testing/projects to understand their problems and help creative and innovative methods to solve the problem.
- Involve in case studies and field visits/ fieldwork.
- Accustom to the use of standards/codes etc., to narrow the gap between academia and industry.
- Handle advanced instruments to enhance technical talent.
- Gain confidence in modeling of systems and algorithms for transient and steady-state operations, thermal study, etc.
- Work on different software/s (tools) to simulate, analyze and authenticate the output to interpret and conclude.

All activities should enhance student's abilities to employment and/or self-employment opportunities, management skills, Statistical analysis, fiscal expertise, etc. Students and the course instructor/s to involve either individually or in groups to interact together to enhance the learning and application skills of the study they have undertaken. The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks

NEW HORIZON COLLEGE OF ENGINEERING

Scheme of Teaching and Examinations –2024

| | | | TOTAL | 14 | 0 | 4 | 1 | 19 | 23 | 350 | 350 | 700 | |

Note: During the 1st semester, students should enroll 2 online courses (Minimum) and must finish the courses before 4th semester and the evaluation will take place during the 4th semester.

- 1. Mini Project: It can include hands-on practice, coding, mobile app development, and report preparation etc. CIE (Continuous Internal Evaluation) marks will be awarded by a committee comprising the HoD (Head of Department) as Chairman, the guide/co-guide (if any), and a senior faculty member of the department. All postgraduate students in the program must complete mini-project. The CIE marks for Mini-Project work will be based on the evaluation of the Mini-Project work and Report, Presentation skills, and performance in the Question and Answer session, in the ratio 50:25:25. Mini-Project is considered a passing requirement and is necessary for vertical progression and the award of the degree. Students who do not take up or complete the Mini Project will be declared as failing the course and will need to complete it during a subsequent semester.
- 2. **Internship**: All the students shall have to undergo a mandatory internship of **06 weeks during the vacation of II and III semesters**. A University examination shall be conducted during III semester and the prescribed internship credit shall be counted in the same semester. The internship shall be considered as a head of passing and shall be considered for vertical progression as well as for the award of degree. Those, who do not take-up/complete the internship shall be declared as fail in the internship course and have to complete the same during the subsequent University examination after satisfying the internship requirements.

Course outcomes:

At the end of the course, the student will be able to:

| 24SCS13.1 | Comprehend fundamental concepts prevalent in dynamic programming languages. |
|-----------|--|
| 24SCS13.2 | Analyze the architectural principles behind concurrent programming enabling scalability through asynchronous code. |
| 24SCS13.3 | Implement event-driven programming constructs and methodologies effectively. |
| 24SCS13.4 | Investigate concurrent programming in the context of basic web applications. |
| 24SCS13.5 | Evaluate deployment paradigms for concurrent applications. |
| 24SCS13.6 | Develop the necessary database prerequisites for concurrent application development. |

MODULE-1 Introduction to JavaScript and HTML forms 24SCS13.1 8 Hours

Variables, Operators, Control Structures and Loop statements, Switch statement, Arrays, Functions, String functions; HTML Forms - getElementById, Email function, Radio Button, Dropdown Lists, Checkboxes and Validating forms, Event Handling, Form Validation, AJAX for Form Submission, Form Accessibility, Advanced Input Types (added)

Skill Development Activities

1: Programming Logic and Functions

Problem Statement: Develop a program in JavaScript to generate the Fibonacci sequence up to a specified number 'n'. Implement the solution using a function and demonstrate how the sequence is produced for a given input.

Instructions:

- a) Write a JavaScript function, **generateFibonacci(n)**, that takes an integer 'n' as input.
- b) Inside the function, create logic to generate the Fibonacci sequence up to 'n' terms
- c) Print or display the generated sequence as output.
- d) Test your function by displaying the Fibonacci sequence up to the 10th term.

2: HTML Form Validation and JavaScript Interaction

Problem Statement: Create an HTML form to collect user details and implement JavaScript-based validation for the form inputs, including email and password confirmation.

Instructions:

- a) Design an HTML form that collects user information: name, email, password, and password confirmation.
- b) Implement JavaScript functions to validate the form inputs:
 - Ensure the email input follows the correct email format.
 - Validate that the password matches the confirmed password.
 - Display appropriate error messages if the validation fails.

d) Test your form by attempting to submit with incorrect or incomplete inputs to observe the validation in action.

MODULE-2 Basics of Node.js & Asynchronous Node.js

24SCS13.2

8 Hours

Definition, Concepts, Usage of node.js, Core modules, printing in color, Import npm modules, Debugging and Error messages. Asynchronous Node.js: Asynchronous basics, Call Stack, Callback, Queue, Event loop, Http requests, Error handling, Callback function, Callback abstraction and Callback chaining

Skill Development Activities

3: Asynchronous HTTP Server with Node.js

Problem Statement: Develop a Node.js program that creates an asynchronous HTTP server and handles delayed responses.

Instructions:

- a) Write a Node.js script that utilizes the http core module to create an HTTP server listening on port 3000.
- b) Implement asynchronous handling of HTTP requests using a 2-second delay before responding.
- c) Upon receiving a request, the server should respond with a message after the delay.
- d) Explain the asynchronous nature of Node.js by describing how the event loop, callback queue, and callback function are involved in processing delayed responses.
- e) Test the server by accessing "http://localhost:3000/" in a browser or using tools like Postman.

4: npm Module Usage for Console Styling in Node.js

Problem Statement: Create a Node.js program demonstrating the usage of a npm module for colorful console printing.

Instructions:

- a) Install the 'chalk' npm module using the command npm install chalk.
- b) Write a Node.js script that imports the 'chalk' module and showcases its usage for console output styling.
- c) Print multiple messages to the console, each with different colors, text styles, and background colors using 'chalk'.
- d) Explain the significance of using 'chalk' or similar npm modules for console output enhancement in Node.js applications.
- e) Discuss the advantages and potential use cases of utilizing npm modules for styling console output.

MODULE-3 Event Driven Programming

24SCS13.3

8 Hours

Introduction, Example and Node Applications working paradigm, Event Emitter – Class, Methods and Events, Buffers – create, read and write, convert buffers to JSON format, Streams – read, write, piping and chaining, Globalobjects - filename, dirname, setTimeout(cbms), clearTimeout(t), console and process object.

Skill Development Activities

5: Event Emitters and Buffered File Handling

Objective: Develop a Node.js program that utilizes Event Emitters for file handling, working with Buffers, and converting data to JSON format.

Instructions:

- a) Implement an Event Emitter class named 'FileProcessor' with methods for reading, writing, and handling file events.
- b) Utilize the 'fs' core module to handle file operations (reading and writing) using Buffers
- c) Create event handlers for 'read', 'write', and 'error' events within the 'FileProcessor' class.
- d) Demonstrate reading data from a text file, processing it as a Buffer, and converting it to JSON format.
- e) Use event emitters to emit events upon successful file read or write operations.

f) Display the contents of the file in JSON format.

Program 6: Working with Streams and Global Objects in Node.js

Objective: Develop a Node.js program demonstrating the usage of Streams, Global Objects, and the Console & Process objects.

Instructions:

Create a Node.js script that showcases the use of streams for reading and writing data from one file to another using piping and chaining techniques.

- a) Access and display information about the global objects 'filename' and 'dirname' within the script. Utilize the 'console' object to output formatted messages to the console, highlighting details about the current process.
- b) Implement a function that utilizes setTimeout to display a message after a specified delay and clear the timeout using clearTimeout.
- c) Explain how streams enable efficient handling of large datasets and their advantages over traditional file handling techniques.
- d) Discuss the role and significance of global objects, console methods, and process-related functionalities in Node.js applications.

MODULE-4 Web Servers and API from browser

24SCS13.4

8 Hours

Introduction, Web Application architecture, creating a web server using Node, serving up HTML and JSON, Static assets, CSS, JS images, Dynamic Pages with Templating, Accessing the Query String, Default Function Parameters, Browser HTTP Requests with Fetch, Creating a Search Form.

Skill Development Activities

Program 7: Creating a Basic Web Server with Node.js

Objective: Develop a simple Node.js application to create a web server serving static assets (HTML, CSS, JS, images) and dynamic content using templating, handling query strings, and implementing default function parameters.

Instructions:

- a) Create a Node.js script that initializes an HTTP server using the 'http' core module.
- b) Serve static assets (HTML, CSS, JS, images) by setting up routes for different file types and sending appropriate responses.
- c) Implement a templating engine (like EJS or Handlebars) to render dynamic pages using Node.js.
- d) Demonstrate accessing and parsing query strings from URL requests to fetch user inputs.
- e) Utilize default function parameters in the server-side code for handling missing or undefined parameters.
- f) Use the Fetch API in a basic HTML file to make HTTP requests to your Node.js server and retrieve data.

Program 8: Implementing a Search Form with Node.js and Fetch API

Objective: Develop a Node.js application that includes a search form and handles HTTP requests initiated by the Fetch API from a web browser.

Instructions:

- a) Design a simple HTML file containing a search form that takes user input.
- b) Write a Node.js script that sets up a server and handles GET requests to a specific endpoint for search queries.
- c) Implement a route on the server to process search queries received from the browser using the Fetch API.
- d) Use the query parameters passed in the Fetch request to perform a basic search operation (e.g., searching through an array or predefined data).
- e) Return the search results back to the client-side (browser) as JSON data in the Fetch response.
- f) Display the search results on the web page using JavaScript to handle the response data.

| MODULE-5 | Application Deployment and Databases | 24SCS13.5 & | 8 Hours |
|----------|--------------------------------------|-------------|---------|
| | | 24SCS13.6 | |

Introduction to any one Online development platform (like GitHub, Heroku), Version control, Exploring, Integrating, Setting up SSH keys, Pushing code.MongoDB and NoSQL introduction - Installation, Connecting and Inserting, Querying, Update and Delete documents.

Skill Development Activities

Program 9: GitHub Integration & Version Control

Objective: Set up a GitHub repository, integrate it with a local project, and demonstrate version control operations.

Instructions:

- a) Create a new repository on GitHub.
- b) Initialize a local project directory with Git, set up version control, and connect it to the GitHub repository.
- c) Write a simple program or use an existing project to demonstrate version control operations:
 - a. Create multiple code versions by adding, modifying, and deleting files.
 - b. Commit these changes with descriptive commit messages.
 - c. Branch out, merge branches, and resolve merge conflicts if necessary.
- d) Explore the use of SSH keys for secure communication between the local system and GitHub.
- e) Push the local repository's code to the GitHub remote repository.

Program 2: MongoDB Operations - Installation & CRUD Operations

Objective: Set up MongoDB, establish a connection, and perform CRUD operations on a database.

Instructions:

- a) Install MongoDB locally on your machine or use a cloud-based service.
- b) Write a Node.js script to establish a connection to the MongoDB server using the 'mongodb' Node.js driver.
- c) Implement functions for inserting, querying, updating, and deleting documents in a MongoDB collection:
 - a. Insert new documents into a collection.
 - b. Retrieve documents based on specific criteria using query operations.
 - c. Update existing documents by modifying their fields.
 - d. Delete documents from the collection based on certain conditions.
- d) Demonstrate these CRUD operations on a sample database and collection.

CIE Assessment Pattern (50 Marks - Theory)

| RBT Levels | | Marks Distribution | | | | | |
|------------|------------|--------------------|--------------------------------------|-------|--|--|--|
| | | Test (s) | Qualitative Assessments based on SDA | MCQ's | | | |

MODULE-1 User Interface Introduction & Characteristics

24SCS14.1 8 Hours

Definition, Importance and Benefits of good design, **Characteristics of Graphical Systems:** GUI, Advantage and disadvantages of graphical systems, Characteristics of GUI. **Characteristics of Web User Interface:** GUI vs. Web page design, Merging of graphical Business systems and the web, Principles of user interface design.

Skill Development Activities

Activity-1: Comparative Analysis and Design Principles

Objective: Enhance understanding of different interface designs and principles through comparative analysis.

Instructions:

Research and Presentation:It is a group activity. Each group is assigned with one type of graphical system (GUI) and one aspect of web user interfaces (Web page design). Instructed them to do a research and create presentations:

- Describe the characteristics, advantages, and disadvantages of their assigned system.
- Discuss principles of user interface design relevant to their systems.

Comparative Analysis: After presentations, a group discussion will be conducted to compare GUIs and Web page designs:

- Analyze similarities and differences between GUIs and web interfaces.
- Identify principles that overlap or differ in the two design approaches.

Case Study Review: Consider any case studies showcasing successful integration or challenges when merging graphical business systems with web interfaces.

Practical Application: Task participants must create a comparative analysis report highlighting key design principles and merging techniques between GUIs and web interfaces.

Outcome: Improved comprehension of design characteristics, benefits, and principles through comparative analysis and practical application.

| MODULE-2 User Interface Design Process | | | | | | CS14.2 | 8 Hours | |
|--|-------------------------|------------|---------------|--------|-----------|-----------|-----------|-----|
| Obstacles and | pitfalls in development | path, Five | commandments, | Common | Usability | problems, | Practical | and |

objective measures of usability; **Clients:** Important human characteristics in design, Human considerations in design, user's psychological and physical characteristics, methods for understanding users.

Skill Development Activities

Activity-2: User-Centric Design

Objective: Enhance understanding of user characteristics, usability problems, and methods for user-centered design.

Instructions:

User Characteristics Analysis:

- Introduce participants to various human characteristics influencing design (psychological, physical).
- Discuss on how these characteristics impact user experience and design decisions.
- Could be a group activity to research and present on specific user characteristics (e.g., cognitive abilities, motor skills).

Usability Problems Identification:

- Consider case studies or examples showcasing common usability problems in design.
- Analyze these problems, identifying the root causes and their impact on user experience.
- Encourage discussions on practical measures to mitigate or solve these problems.

Usability Testing and Measures:

- Conduct a usability testing session with a simple prototype or existing interface.
- Observe users interacting with the interface and note usability issues.
- Discuss how to objectively measure usability, considering metrics like task completion time, error rates, etc.

Client's Perspective and User Understanding:

- Introduce the importance of understanding clients' needs and user requirements in design.
- Perform role-playing sessions where participants represent designers and clients, focusing on effective communication.
- Explore methods (interviews, surveys, personas) for understanding users and gathering requirements.

Design Recommendations and Prototyping:

- Based on insights gained, task participants to propose design recommendations to address common usability problems.
- Create low-fidelity prototypes reflecting improvements based on user-centric design principles.
- Perform discussions on iterating designs based on feedback and iterative usability testing.

Outcome: Improved comprehension of user-centric design principles, identification of usability problems, practical usability testing experience, and effective methods for understanding user needs. This activity fosters a user-centered mindset among participants, emphasizing the importance of human characteristics, usability, and client considerations in design.

24SCS14.3

MODULE-3 UX AND Design Thinking

Introduction:Product development cycle, characteristics of good user experience, The role of a beginner UX designer, responsibility of an entry level UX designer.

Design thinking: A UX design framework, Designing cross platform experience, UX research, research methods, primary research, secondary research, bias in UX research.

8 Hours

Skill Development Activities

Activity: Entry-Level UX Design Workshop

Objective: Develop foundational skills for beginner UX designers, emphasizing design thinking and research methodologies.

Instructions:

Introduction to UX Design and Roles:

- Provide an overview of the product development cycle and the essential characteristics of good user experience.
- Discuss the responsibilities and role of an entry-level UX designer in a team.
- Share case studies or examples highlighting the impact of a beginner UX designer's role in successful products.

Design Thinking Framework and Cross-Platform Experience:

- Introduce design thinking as a problem-solving framework in UX design.
- Perform a group activity on a hypothetical cross-platform experience design challenge.
- Complete the stages of empathizing, defining, ideating, prototyping, and testing for their designs.

UX Research Methods:

- Brainstorm on UX research methodologies covering primary and secondary research techniques.
- Provide examples and case studies demonstrating bias in UX research and how it can affect design outcomes.
- Discussion on mitigating bias and ensuring validity in research.

Practical Research Exercise:

- Perform a group activity on specific UX research method (e.g., user interviews, surveys, competitor analysis).
- Task each group with conducting a short research activity related to the hypothetical cross-platform design challenge.
- Present their findings, discussing the relevance of their research in the design process.

Reflection and Design Presentation:

- Have each group reflect on their design thinking process, research findings, and insights gained.
- Present their design concepts, explaining how research influenced their design decisions.
- Feedback and discussions among participants on different approaches and lessons learned.

Outcome: Improved understanding of the UX design process, application of design thinking in cross-platform experience, familiarity with various UX research methods, and awareness of the responsibilities and impact of an entry-level UX designer. This activity aims to provide hands-on experience and foundational knowledge crucial for beginners entering the field of UX design.

MODULE-4 User Experience and Its Elements

24SCS14.4 8 Hour

Introducing User Experience, From Product design to User experience design, Designing for experience, User experience and the web, Good user experience is good business. **Elements:** The five planes, Building from bottom to top, A basic duality, Elements of User experience, Strategy Plane – Defining the strategy, Product Objectives, User needs.

Skill Development Activities

Activity: User Experience Elements and Strategy

Objective: Enhance understanding of the five planes of user experience and strategize product objectives based on user needs.

Instructions:

Introduction to User Experience Elements:

- Provide an overview of the five planes of user experience: strategy, scope, structure, skeleton, and surface.
- Explain how these planes build upon each other to create a holistic user experience.
- Discuss the importance of understanding each plane for designing successful products.

Group Activity - Exploring User Experience Elements:

- Divide participants into groups, assigning each group one plane of the user experience to focus on.
- Task each group with exploring and presenting characteristics, components, and examples related to their assigned plane.
- Discuss on how each plane contributes to overall user experience design.

Defining Strategy and Product Objectives:

- Introduce the strategy plane and its role in defining product objectives aligned with user needs.
- Conduct an interactive session on identifying and understanding user needs and expectations.
- Craft the product objectives that resonate with identified user needs.

Case Study Analysis and Strategy Development:

- Provide case studies showcasing successful products or services and their strategic planning processes.
- Break participants into smaller groups to analyze these case studies and extract strategic insights.
- Formulate a strategy plan for a hypothetical product, aligning it with user needs.

Presentation and Strategy Refinement:

- Have groups present their formulated strategy plans to the larger audience.
- Perform feedback and discussions on different strategic approaches and their alignment with user needs.
- Facilitate a session to refine and improve the strategies based on group discussions and feedback.

Outcome: Enhanced comprehension of the five planes of user experience, understanding the role of strategy in product design, and the ability to align product objectives with user needs. This activity aims to provide participants with practical knowledge and skills essential for developing strategic thinking in user experience design.

| MODULE-5 | User Experience Design Framework | 24SCS14.5 & | 8 Hours |
|-----------------|----------------------------------|-------------|---------|
| | | 24SCS14.6 | |

Scope Plane - Defining the scope Functionality and content, Defining requirements, Functional specification.

Structure Plane – Defining the structure, Interaction Design, Information architecture.

Skeleton Plane – Defining the Skeleton, Convention and Metaphor, Wireframes

Surface Plane – Defining the surface, Making sense of the senses, Contrast and Uniformity, Design composite and Styleguides.

Skill Development Activities

Activity: Journey Across the User Experience Planes

Objective: Enhance understanding and proficiency across the scope, structure, skeleton, and surface planes of user experience design.

Instructions:

Introduction to User Experience Planes:

- Provide an overview of the four planes Scope, Structure, Skeleton, and Surface emphasizing their significance in user experience design.
- Discuss how each plane contributes to the overall user experience and the sequential nature of their development.

Practical Exercises on Each Plane:

• Conduct tutorials on each plane, focusing on practical exercises and activities:

- Scope Plane: Define scope, functionality, requirements, and create functional specifications for a hypothetical product.
- Structure Plane: Explore interaction design principles, build information architecture, and discuss defining structures.
- Skeleton Plane: Engage in exercises on convention, metaphor, and wireframing techniques to develop a basic skeleton.
- Surface Plane: Discuss making sense of senses, contrast, uniformity, and delve into creating design composites and style guides.

Cross-Plane Design Challenges:

- Formulate cross-plane design challenges, combining elements from each plane.
- Assign mixed-discipline groups, tasking them to collaborate and create a comprehensive design solution.
- Emphasize the importance of integrating learning from each plane into their solutions.

MODULE-3 Design of Sampling 24SCS15.13 8 Hours

Introduction: Sample Design, Sampling and Non- sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs.

Measurement and Scaling: Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Techniques, Multidimensional Scaling, Deciding the Scale.

Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method.

Self-study / Case Study / Applications Evaluate a healthcare study's measurement scale selection, discussing the reliability and validity of Likert scales in measuring patient satisfaction, addressing potential sources of measurement error and justifying the choice of a specific scaling technique for multidimensional assessment.

MODULE-4 Testing of Hypotheses

24SCS15.4 8 Hours

Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis, Chi-square Test: Test of Difference of more than two proportions, Test of independence of attributes, Test of goodness of fit, Cautions in Using Chi Square Tests.

Interpretation and Report Writing: Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Presentation, and Writing Research Reports.

Self-study / Case Study / Applications

Hypothesis Testing for Mean:

A manufacturing company claims that the average lifespan of its product is 50 months. A sample of 30 products resulted in a mean lifespan of 48 months with a standard deviation of 5 months. At a 5% significance level, test the company's claim.

Hypothesis Testing for Proportion:

A researcher claims that the proportion of people preferring Product A over Product B is 0.6. In a survey of 200 individuals, 120 prefer Product A. Test the claim at a 1% significance level.

Hypothesis Testing for Difference of Two Means:

Compare the average scores of two teaching methods given to two different groups of students. Group A's mean score is 75 with a standard deviation of 10, and Group B's mean score is 80 with a standard deviation of 12. For a significance level of 0.05, test if there's a significant difference between the teaching methods.

Chi-square Test for Difference of More than Two Proportions:

A survey examines the preference for four different ice cream flavors among people of different age groups. In a sample of 500 respondents, test whether the preference for flavors is the same across age groups (significance level of 0.05).

MODULE-5 IP & Patents Act 24SCS15.5 & 8 Hours 24SCS15.6

Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act1999, Copyright Act,1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semiconductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity.

Patents Act: Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Patentable Subject

| Matter, Rights Conferr | red, Exceptions, Term of protection, Conditionson Patent Applicants, Process Patents. |
|------------------------|---|
| Self-study / Case | 1. List a few innovating patentable ideas. |
| Study / Applications | 2. Discuss the role of patents in fostering innovation and economic growth within |
| | the pharmaceutical industry. Analyze the balance between patent protection and |
| | public access to essential medicines, considering the ethical and societal |
| | implications. Provide examples and arguments supporting both sides of this debate, |
| | and propose strategies that strike a balance between incentivizing innovation and |
| | ensuring affordable access to life-saving medications. |

MODULE-1 Cloud Computing- An Introduction

24SCS21.1 8 Hour

Cloud Computing Architecture – The Cloud Reference Model – Cloud Characteristics – Cloud Deployment Models: Public, Private, Community, Hybrid Clouds – Cloud Delivery Models: IaaS, PaaS, SaaS – Open-Source Private Cloud Software: Eucalyptus, Open Nebula, Open Stack.

Skill Development Activities

Perform the tasks to develop insight into the AWS environment:

1. Create and Configure an EC2 Instance:

- Log in to your AWS Management Console.
- Navigate to the EC2 service.
- Launch a new EC2 instance by selecting an Amazon Machine Image (AMI) of your choice, like a basic Linux or Windows instance.
- Follow the step-by-step wizard to configure the instance settings, such as instance type, security groups, and key pairs.
- Access the newly created instance using SSH or RDP depending on the operating system, and perform basic tasks like installing software or updating packages.

2.Set Up and Test S3 Bucket:

- Access the AWS Management Console.
- Go to the S3 service.
- Create a new S3 bucket with a unique name in a selected region.
- Upload a file (e.g., an image, text file, etc.) to this newly created bucket.
- Configure permissions for the file and the bucket, setting up access control settings like making the file public or private.

 Retrieve the URL of the uploaded file and test access (if public) or access control by trying to access it through the URL and adjusting permissions accordingly.

MODULE-2 Virtualization

24SCS21.2 8 Hours

Data Center Technology, Virtualization, Characteristics of Virtualized Environments, and Taxonomy of Virtualization Techniques, Virtualization and Cloud Computing, Pros and Cons of Virtualization, Implementation Levels of Virtualization, Tools and Mechanisms: Xen, VMWare, Microsoft Hyper-V, KVM, VirtualBox.

Skill Development Activities

AWS Computing and Marketplace - Experiment with AWS computing services and serverless computing using AWS Lambda

3. Experiment with AWS Marketplace:

Objective: Find and deploy a software or solution from the AWS Marketplace.

- 1. Access the AWS Management Console.
- 2. Go to the AWS Marketplace.
- 3. Browse through the categories or use the search bar to find a specific software or solution you're interested in (e.g., a content management system, security tool, etc.).
- 4. Select the desired product and review its details, pricing, and supported configurations.
- 5. Click on "Continue to Subscribe" or "Buy Now" and follow the instructions to deploy the software to your AWS account.
- 6. Once deployed, access the software and configure it as needed, following any documentation or guidelines provided by the vendor.

4. Experiment with AWS Lambda Function:

Objective: Create a simple AWS Lambda function and trigger it using an event source.

- 1. Log in to your AWS Management Console.
- 2. Go to the AWS Lambda service.
- 3. Click on "Create function" and choose the option to author from scratch.
- 4. Define the function details like name, runtime (e.g., Node.js, Python, etc.), and permissions.
- 5. Write a simple function code. For example, a Node.js functions that logs a message to the console.
- 6. Save the function and then create a trigger. You can use an S3 bucket upload event, API Gateway, or another trigger source of your choice.
- 7. Configure the trigger and link it to the Lambda function.
- 8. Test the function by invoking the trigger. For instance, if you use an S3 bucket upload event, upload a file to the specified bucket to trigger the Lambda function.
- 9. Verify that the Lambda function executes as expected by checking Cloud Watch logs or any relevant output.

MODULE-3 Cloud Computing Mechanism

24SCS21.3 8 Hours

Cloud Storage, Cloud Usage Monitor, Resource Replication – Specialized Cloud Mechanism: Load Balancer, SLA Monitor, Pay-per-use Monitor, Audit Monitor, Failover System, Hypervisor, Resource Cluster, Multi Device Broker, State Management Database–Cloud Management Mechanism: Remote Administration System, Resource Management System, SLA Management System, Billing Management System.

Skill Development Activities

Elastic Cloud Compute-Auto Scaling, Elastic Load Balancing, Catalog Market place of AWS – It provides an opportunity to understand and implement a scalable infrastructure using Auto Scaling, Elastic Load Balancing for EC2 instances, and also explores the AWS Marketplace Catalog for potential add-ons or solutions to enhance the AWS-based application or system.

Objective: Set up an Auto Scaling Group with Elastic Load Balancing for EC2 instances and explore the AWS Marketplace Catalog.

EC2 Instance Setup:

- Log in to your AWS Management Console.
- Navigate to the EC2 service.
- Launch an EC2 instance or use an existing one.
- Configure the instance settings like instance type, network settings, and storage.
- Once the instance is running, ensure it has a web server or an application installed.

Elastic Load Balancer (ELB):

- Create an Elastic Load Balancer (ELB) from the EC2 Dashboard.
- Configure the ELB with your EC2 instance(s) as its targets.
- Set up listeners and health checks to ensure the ELB routes traffic properly.

Auto Scaling Group:

- Create an Auto Scaling Group from the EC2 Dashboard.
- Configure the Auto Scaling Group with the desired minimum, maximum, and desired number of instances.
- Attach the ELB created earlier to the Auto Scaling Group for load balancing.

Testing Auto Scaling:

- Test the Auto Scaling configuration by simulating increased demand. For instance, you can generate increased traffic or load on your application.
- Observe how Auto Scaling responds by automatically provisioning additional instances to handle the load.

AWS Marketplace Catalog:

- Go to the AWS Marketplace from your AWS Management Console.
- Explore the catalog to find a relevant software or solution that could complement your EC2 instances or application.
- Read the details, pricing, and documentation of the selected product.
- If possible, deploy the chosen product into your AWS environment and test its integration with your setup.

| MODULE-4 | Programming Model and Security | 24SCS21.4 & | 8 Hours |
|----------|--------------------------------|-------------|---------|
| | | 24SCS21.5 | |

Apache Hadoop, Hadoop Map Reduce, Hadoop Distributed File System, Hadoop I/O, Developing a MapReduce Application, MapReduce Types and Formats, Map Reduce Features, Hadoop Cluster Setup, Administering Hadoop, Threat Agents, Cloud Security Threats. Cloud Security Mechanism: Encryption, Hashing, Digital Signature, Public Key Infrastructure, Identity and Access Management, Single Sign-on, Cloud Based Security Groups.

Skill Development Activities

Experiment with Users, Groups, and Roles-Understanding Credentials, Security Policies, IAM abilities and limitations of AWS - Practical experience in setting up IAM users, groups, and roles, defining policies, and understanding how these elements interact within the AWS ecosystem. Additionally, observing the abilities and limitations of IAM helps in comprehending the security measures and access controls within AWS.

Objective: Set up Users, Groups, and Roles in AWS IAM, define policies, and explore their abilities and limitations.

Steps:

1. IAM User Setup:

- Log in to your AWS Management Console.
- Go to the IAM service.
- Create a new IAM user with programmatic access (access key ID and secret access key) and console access (login credentials).
- Define a username, access type, and assign permissions based on policies.
- Save the access key ID and secret access key securely for later use.

2. IAM Group Creation:

- Create an IAM group and assign permissions to the group by attaching policies.
- Add the previously created IAM user(s) to this group.

3. IAM Role Definition:

- Define an IAM role with specific permissions, assuming an access scenario (e.g., EC2 instance accessing S3 bucket).
- Define trust relationships to specify which entities can assume the role (e.g., EC2 service or specific IAM users).

4. Setting Security Policies:

- Define and attach IAM policies to users, groups, or roles to grant or restrict access to AWS resources.
- Experiment with various policy conditions, granting specific actions or resources and denying certain actions.

5. Testing IAM Abilities and Limitations:

- Log in using different IAM users to understand their respective access levels and limitations within the AWS Management Console.
- Test permissions by attempting various actions (e.g., creating EC2 instances, accessing S3 buckets) according to the assigned policies.

6. Observe IAM Limitations:

• Understand and note the limitations of IAM, such as service-specific limitations, restrictions in policy conditions, or access controls.

MODULE-5 Cloud Computing Tools and Applications

24SCS21.6 8 Hours

Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture (User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim, Introduction to GreenCloud, Scientific Applications – Healthcare, Geo-science and Biology. Business and Consumer Applications – CRM and ERP, Social Networking, Media Applications and Multiplayer, Online Gaming.

Skill Development Activities

Hands-on: Cloud simulators Create a Simple Simulation:

- Write a basic Java program utilizing CloudSim libraries.
- Define a Datacenter with one or multiple Hosts.
- Create a set of Virtual Machines (VMs) with specified characteristics (e.g., processing power, RAM, bandwidth).

 Generate Cloudlets (tasks) representing computing jobs to be executed by the VMs.

Configure Simulation Parameters:

• Set parameters like the number of Data centers, Hosts, VMs, Cloudlets, scheduling policies, and simulation duration.

Run the Simulation:

- Execute the simulation and observe the progression of tasks (Cloudlets) being allocated to VMs, their execution, and completion.
- Monitor the resource utilization within the simulated cloud infrastructure.

| Course outcor | nes: | | |

At the end of the course, the student will be able to:

| | • |
|-----------|---|
| 24SCS22.1 | Understand DevOps principles to meet software development requirements. |
| 24SCS22.2 | Understand the process of CI using Jenkins. |
| 24SCS22.3 | Implement containerization using Docker. |
| 24SCS22.4 | Deploy an application on Kubernetes cluster. |
| 24SCS22.5 | Explore IaC to provision cloud resources and manage the configuration of remote server. |
| 24SCS22.6 | Apply varios methods to monitoring the server and application metrics. |

Mapping of Course Outcomes to Program Outcomes and Program Specific Outcomes:

| | P01 | P02 | PO3 | P04 | P05 | P06 | PSO1 | PSO2 |

MODULE-1 Introduction 24SCS22.1 8 Hours

Software Engineering - Traditional vs Agile Process Models; What is DevOps?; Why DevOps?; Introduction To AWS, Azure and GCP; Source Code Management using Version Control Systems - Git, GitHub, GitLab, BitBucket; Compile and Build Using Maven - Introduction, Installation of Maven, POM files, Maven Build Lifecycle, Maven Commands, Create and Build Artifacts, Maven Profiles, Maven Repositories, Maven Plugins, Dependency Management.

MODULE-2 | Continuous Integration Using Jenkins 24SCS22.2 Introduction to CI/CD, Jenkins Architecture Overview, Install & Configure Jenkins, Build Jobs and Configurations, Jenkins Plugins, Jenkins Integration with other Tools

MODULE-3 Containerization with Docker 24SCS22.3 8 Hours

Virtualization vs Containerization, Introduction to Docker and DockerHub, Docker Commands, Understanding and Building Docker Images, Creating Containers, Working with Containers - Containerize an Application

Container Orchestration using Kubernetes 24SCS22.4 8 Hours Introduction to Kubernetes, Advantages of Kubernetes, Kubernetes Architecture, Deploying a Kubernetes Cluster, Creating Kubernetes Objects, Deploying an Application to Kubernetes Cluster.

| MODULE-5 | IaC, Configuration Management, Monitoring and | 24SCS22.5 & | 8 Hours |
|----------|---|-------------|---------|
| | Observability | 24SCS22.6 | |

IaC: Introduction to Terraform, How does Terraform Work?, Statefile Management, Install Terraform, Provision Cloud Resources using Terraform Configuration Files, Configuration Management: Introduction to Ansible, Start automating with Ansible, Building an Inventory, Creating a Playbook, Ansible Concepts, Monitoring and Observability: Introduction to Prometheus, Grafana and OpenTelemetry, Difference between Logs, Metrics and Traces.

CIE Assessment Pattern (50 Marks - Theory)

| L6 | Create | |

SUGGESTED ACTIVITIES:

- 1. Creating a new Git repository, cloning existing repository, checking changes into a Git repository, pushing changes to a Git remote, Creating a Git branch
- 2. Installing Docker container on windows/Linux, issuing docker commands
- 3. Building Docker Images for Python Application
- 4. Setting up Docker and Maven in Jenkins and First Pipeline Run
- 5. Running Unit Tests and Integration Tests in Jenkins Pipelines Suggested Learning Resources:

Activity-Based Learning (Suggested Activities in Class)/ Practical Based learning

- **Design Challenges**: Present the real-world design challenges and come up with innovative solutions. These challenges can range from product design to service design.
- **User Research and Empathy Activities**: Engage in activities that involve interacting with potential users or customers. They can conduct interviews, surveys, and observations to gain a deeper understanding of user needs and pain points.
- **Prototyping Workshops**: Learn to create prototypes using various tools and materials. Encourage them to build physical and digital prototypes to test their design concepts.
- **Design Thinking Workshops**: Participate design thinking workshops where students can work on real projects. These workshops can include brainstorming, ideation, and collaborative problem-solving activities.
- **Role-Playing Scenarios**: Engage in role-playing scenarios to understand user experiences and perspectives. This can help them to empathize with users and design solutions that address their needs.
- **Field Studies**: Plan field trips to observe and study real-world design challenges. They can gain insights from visiting companies, organizations, or places where design thinking is applied.

Implementing Microservice Communication

MODULE-3

8 Hours

24SCS242.3

Looking for the Ideal technology, Technology choices–Remote Procedure calls, REST, GraphQL, Message Brokers, Serialization formats, Schemas, Handling change between Microservices, Service Discovery, Service Meshes and API gateways.

Skill Development Activities

5. Comparative Analysis of Communication Technologies:

- Objective: Evaluate and compare the efficiency and suitability of Remote Procedure Calls (RPC), REST, GraphQL, and Message Brokers for interservice communication in a microservices architecture.
- Methodology: Develop separate microservices implementing each communication technology. Measure and analyze factors such as latency, data transfer efficiency, ease of implementation, and flexibility.
- Outcome: A comparative report highlighting the strengths and weaknesses of each technology, aiding in informed technology selection.

6. Adaptability Testing with Serialization Formats and Schemas:

- Objective: Investigate the impact of changes in data structures and schemas on inter-service communication.
- Methodology: Create microservices communicating through different serialization formats (e.g., JSON, XML) and schemas. Introduce changes to the schema and assess how well each technology adapts to schema evolution
- Outcome: Findings on how effectively RPC, REST, GraphQL, or Message Brokers handle schema changes and serialization format variations.

MODULE-4 Build Workflow

24SCS242.4 8 Hours

Database transactions, Distributed transactions, Sagas. Build: Continuous Integration, Build pipelines and continuous delivery, Mapping source code and build to Microservices.

Skill Development Activities

7. Database Transaction Performance Analysis:

- **Objective:** Assess the performance and behavior of database transactions under varying conditions.
- **Methodology:** Create a series of experiments simulating different transaction scenarios (e.g., read-heavy, write-heavy, concurrent transactions). Measure transaction throughput, latency, and database locking mechanisms under load.
- **Outcome:** Insights into the performance characteristics of database transactions, aiding in tuning and optimizing transactional behavior.

8. Distributed Transactions and Consistency Testing:

- **Objective:** Explore the challenges and approaches to maintaining data consistency in distributed transactional systems.
- **Methodology:** Set up multiple microservices communicating with distributed databases. Create experiments that involve transactions spanning across services. Evaluate consistency models (e.g., strong consistency, eventual consistency) in distributed environments.
- **Outcome:** Understanding the complexities and trade-offs associated with maintaining data consistency across distributed transactions.

MODULE-5 Deployment and Testing 24SCS242.5 & 8 Hours 24SCS242.6

From logical to physical, Principles of Microservice deployment, Deployment options, Kubernetes and container orchestration. Testing: Types of tests, Test scope, Implementing service tests, Implementing Endto-End tests.

Skill Development Activities

9. Logical to Physical Architecture Mapping:

- **Objective:** Demonstrate the translation process from logical architecture design to physical deployment setups.
- **Methodology:** Create a simplified system design with logical components representing Microservices. Experiment with mapping these logical

- components to physical resources (e.g., servers, containers) considering factors like scalability, performance, and fault tolerance.
- **Outcome:** Insights into the challenges and considerations involved in translating conceptual architectural designs into practical deployment configurations.

10. Kubernetes and Container Orchestration:

- **Objective:** Explore the functionalities and capabilities of Kubernetes in orchestrating Microservices deployed in containers.
- Methodology: Set up a Kubernetes cluster and deploy a Microservicesbased application. Experiment with Kubernetes features like service discovery, scaling, load balancing, and auto-healing. Analyze the impact on deployment, monitoring, and management.
- **Outcome:** Understanding the benefits and challenges of using Kubernetes for container orchestration in Microservices environments.

MODULE-4 Natural Language Processing

24SCS243.4

8 Hours

Introducing NLP: patterns and structure in language, Essential reading, Recommended reading, Additional reading, Learning outcomes, Introduction Basic concepts, Tokenized text and pattern matching Activity: Recognizing names, Parts of speech - Identify parts of speech, Constituent structure, Activity: Writing production rules, Finite-state machines - Word structure, Using the Natural Language Toolkit, Corpora Computational tools for text analysis

Skill Development Activities Python implementation of NLP program – Perform the fundamental NLP techniques such as tokenization, stop words removal, lemmatization, and frequency analysis using the nltk library in Python

MODULE-5 Swarm Algorithms

24SCS243.5 & 8 Hours 24SCS243.6

Ant System, Ant Colony System, Bees Algorithm The Firefly algorithm-algorithm analysis – implementation – variants and Applications.

Skill Development Activities

Python implementation of swarm algorithm: Key steps in the implementation of a Particle Swarm Optimization (PSO) algorithm in Python –

- 1. Initialization of Swarm and Parameters
- **2.** Objective Function Evaluation
- **3.** Updating Particle Velocity and Position
- **4.** Finding Global Best Position
- 5. Termination Condition and Stopping Criteria

MODULE-4 3d Vision and Motion 24SCS244.5 8 Hours

Methods for 3D vision – projection schemes – shape from shading – photo metric stereo – shape from texture – shape from focus – active range finding – surface representations – point – based representation – volumetric representations – 3D object recognition – 3D reconstruction – introduction to motion – triangulation – bundle adjustment – translational alignment – parametric motion – spline-based motion – optical flow –layered motion.

Skill Development Hands-on:3D motion capture with just a phone Activities

MODULE-5 | Face Recognition, Object Detection

24SCS244.6 8 Hours

Overview, Two Stage Object Detectors, Singlest age object detectors, YOLO, Measure Performance of Object Detectors, Train a Custom object Detector using YOLO. Text Detection and Recognition: Overview of OCR, GraphicText Recognition using Tesseract, Text Detection, Modified Pipeline for scene Text Recognition using Tesseract (Python), Scene Text recognition using Keras OCR(Python), Comparing Keras – OCR and Tesseract (Python)

Skill Development Activities Hands-on: Train a face mask detector, Case Study: Automatic Number Plate Recognition(Python)

Activity-Based Learning (Suggested Activities in Class)/ Practical Based learning

- **Biological Database Development**: Design and develop a biological database for a specific research problem.
- **Case Studies in Precision Medicine**: Analyze case studies where bioinformatics plays a pivotal role in personalized medicine, cancer genomics, and pharmaco genomics.
- **Biomedical Literature Mining**: Use text-mining tools to extract information from scientific literature, focusing on gene-disease associations, drug interactions, and pathway analysis.
- **Bioinformatics Challenges and Competitions:** Participate in bioinformatics competitions and coding challenges to enhance their problem-solving skills

Cyber security Plan- cyber security policy, cyber crises management plan., Business continuity, Risk assessment, Types of security controls and their goals, Cyber security audit and compliance, Nationalcyber security policy and strategy.

Self-study / Case Study / Applications

- 1. Explain the significance of cyber security management, compliance, and governance in today's digital landscape. Introduce the purpose of the report and the objectives of your self-study.
- 2. Prepare password policy for computer and mobile device.
- 3. List out security controls for computer and implement technical security controls in the personal computer.
- 4. List out security controls for mobile phone and implement technical security controls in the personal mobile phone. Log into computer system as an administrator and check the security policies in the system

Skill Development Activity

Text Book

Text Book 3: 8, 9, 10, 11

Activity-1: Enhance incident response and decision-making skill: Create simulated

scenarios (e.g., data breach, phishing attack). Form 2-member teams responsible for responding to the scenario, making decisions, and mitigating the cyber threat. perform discussion, analysis, and documentation of response strategies.

Activity-2: Security Policy Review - Review and update security policies and procedures where participants: Assess existing security policies of any firm such as access control, data handling, and incident response. Identify gaps or outdated policies and propose revisions to ensure alignment with current threats and best practices.

Activity-Based Learning (Suggested Activities in Class)/ Practical Based learning

- **Incident Response Simulations**: Create realistic incident scenarios and practice responding to security incidents. This could include scenarios like data breaches, malware infections, or denial-of-service attacks.
- **Security Policy Development:** Develop comprehensive security policies for various organizations. This includes crafting policies for access control, data protection, incident response, and compliance.
- **Risk Assessment and Management Workshops**: Conduct risk assessments for different organizations. They can identify potential threats, vulnerabilities, and the associated risks. Understand how to develop risk management plans to mitigate these risks.

| Activities | Organizational Project Management, Roles and responsibilities of project manager. Skill Development Activities 1. Case Study Analysis on Organizational Influences in Project Management: Task: Analyze case studies or real-world scenarios showcasing organizational influences on project life cycles. Identify and discuss the impact of project stakeholders, project governance, and the creation of project teams on project outcomes. Present findings and recommendations on how these influences can be leveraged or managed effectively in different organizational contexts. 2. Mapping Project Management Knowledge Areas: Task: Create a comprehensive mapping or mind map illustrating the various knowledge areas in project management. Explore and interlink different aspects such as project scope, time, cost, quality, risk, communication, and resource management. Highlight their interconnectedness and how they | | | | | | | arios showcasing fy and discuss the nd the creation of recommendations ectively in different strating the various interlink different ommunication, and ness and how they | | |
| MODULE-2 Project Integration Management 24SCS252.2 8 Hours | | | | | | | | | | |
| Strategic Planning and Project Selection: Strategic planning, Identifying potential projects, Methods for selecting projects, Project management plan contents Project Scope Management: Planning scope management, Requirements collection, Defining Scope, Creating the Work Breakdown Structure, Scope validation and control Project Schedule Management: Planning schedule management, Defining activities, sequencing activities, | | | | | | | | | | |
| | stimating activity durations, Critical path method (CPM), Project Evaluation Review Technique (PERT). | | | | | | | | | |
| Skill Developm | ent | nt Stakeholder Engagement and Communication Plan: • Task: Develop a stakeholder engagement and communication plan for a | | | | | | | | |

stakeholders throughout the project lifecycle. Implement the plan to ensure effective coordination and collaboration among stakeholders.

Work Breakdown Structure (WBS:

Task: Conduct a collaborative session with project team members to create
a Work Breakdown Structure (WBS). Define project deliverables, break
them down into smaller, manageable components, and organize them
hierarchically. Validate the WBS with stakeholders to ensure alignment with
project scope and objectives. Review the WBS periodically to accommodate
changes and maintain scope control.

MODULE-3 Cost and Quality Management

24SCS252.3

8 Hours

Project Cost Management: Principles of cost management, Planning cost management, Cost estimation tools and techniques, Determining the budget, Controlling costs.

Project Quality Management: Planning quality management, managing quality, controlling quality, Tools and techniques for quality control, Improving IT project quality.

Skill Development Activities

Project Quality and Cost management Exercise:

Task: You are the project manager for a mid-sized software development project. The goal is to build a custom CRM solution for a client. The project has a budget of \$500,000 and a timeline of 6 months. The client has emphasized that both quality and budget adherence are top priorities. Plan the cost and quality management metrics for 0 the above project.

MODULE-4 Resource and Communication Management

24SCS252.4 8 Hours

Project Resource Management: The Importance of Resource Management, Keys to Managing and Leading People, Motivation Theories, Developing Resource Management Plan, Estimating activity resources.

Project Communications Management: Importance of Project Communications Management, Managing Communications, monitoring communications, Suggestions for Improving Project Communications

Skill Development Activities

Cost Estimation and Budget Allocation Exercise:

 Task: Simulate a project scenario or select a real project to estimate costs and allocate budgets. Identify individual activities and resources required for the project. Estimate costs associated with each activity, including materials, labor, equipment, and overheads. Allocate budgets considering these estimations and create a comprehensive project budget. Monitor and control expenses against the budget throughout the project lifecycle.

Quality Assurance Review and Improvement Initiative:

Task: Initiate a quality assurance review and improvement program
within a project team or organization. Establish quality standards and
benchmarks aligned with project objectives. Develop a Quality
Management Plan outlining quality processes, metrics, and
responsibilities. Conduct regular quality assurance checks during
project execution to ensure adherence to standards. Implement
corrective actions and continuous improvement strategies based on
quality assessment results.

MODULE-5

Risk and Procurement Management

24SCS252.5 & 24SCS252.6

8 Hours

Project Risk Management: Identifying Risks, Performing Qualitative Risk Analysis, Performing Quantitative Risk Analysis, Monitoring Risks.

Project Procurement Management: Planning Procurement Management, Types of Contracts, Tools and Techniques for Planning Procurement Management, Controlling Procurements.

Project Stakeholder management: Identifying Stakeholders, Planning Stakeholder Engagement, Managing Stakeholder Engagement, Monitoring Stakeholder Engagement.

Skill Development Activities

Risk Assessment and Mitigation Plan:

 Task: Organize a session involving project stakeholders and team members to identify and assess project risks. Use risk identification techniques such as brainstorming or SWOT analysis to identify potential risks. Analyze and prioritize these risks based on their impact and probability. Develop a comprehensive risk mitigation plan outlining strategies to address and mitigate identified risks. Implement risk responses and continuously monitor risks throughout the project lifecycle.

Procurement Strategy Development:

• Task: Develop a procurement strategy for acquiring necessary resources (workers, materials, equipment) for a project. Assess project requirements, identify procurement needs, and define procurement objectives. Outline a procurement plan detailing the procurement process, selection criteria, vendor evaluation, and contract negotiation strategies. Implement the procurement plan ensuring adherence to budgetary constraints and project timelines. Monitor and manage procurement activities to ensure optimal resource acquisition.

accuracy, precision, and recall. Compare and analyze the results to understand the strengths and weaknesses of different classification algorithms.

Cluster Analysis Experiment:

• Task: Conduct a cluster analysis experiment using k-means and association rule mining. Utilize real or synthetic datasets to apply these techniques. Evaluate and compare the effectiveness of k-means in clustering data and association rule mining in discovering interesting relationships between items. Discuss the challenges and limitations of each method, considering different data types and structures.

MODULE-3 Content-Based Recommender Systems

24SCS253.3 8 Hours

Basics of content-based recommender systems – high level architecture, advantages and drawbacks. State of the art of content based recommender systems – Item representation, methods for learning user profiles. Neighborhood – based recommendation: User – based rating prediction, User-based classification, Regression vs. classification, Item-based recommendation.

Skill Development Activities

Comparative Analysis of Recommender Systems Architectures

 Objective: Compare and contrast the high-level architectures, advantages, and drawbacks of content-based recommender systems with state-of-theart techniques.

Implementing Neighborhood-Based Recommendation Techniques

 Objective: Develop a comparative analysis of neighborhood-based recommendation methods, specifically focusing on user-based and itembased techniques.

MODULE-4 Components of Neighborhood Methods

24SCS253.4 8 Hour

Rating normalization, Similarity weight computation, Neighborhood selection. Advanced techniques—Dimensionality reduction methods, Graph-based methods. Collaborative filtering: Introduction, Matrix factorization models - SVD, SVD++, Time-aware factor model, Neighborhood Models -similarity measures, similarity based interpolation.

Skill Development Activities

Development | Numerical problems on

- Rating Normalization
- Similarity Weight Computation
- Neighborhood Selection
- Dimensionality Reduction Methods

MODULE-5 Development of RSs

24SCS253.5 & 8 Hours 24SCS253.6

Developing constraint based recommenders – Development of recommender knowledge bases, User guidance in recommendation processes, Calculating recommendations. Context-aware recommender systems—Context, Modeling contextual information in RSs, Obtaining contextual information. Recommendation system properties, Applications of Recommender Systems.

Skill Development Activities

Developing Constraint-Based Recommenders

- Objective: Enhance skills in building constraint-based recommendation systems.
- Description:
 - Identify a project to develop constraint-based recommendation systems, where constraints play a crucial role in recommendations (e.g., dietary restrictions in a food app, budget limitations in a shopping app).
 - Design and develop knowledge bases that encode constraints, implement user guidance features, and calculate recommendations based on these constraints.
 - Evaluate the effectiveness and accuracy of the recommendation systems based on their ability to adhere to constraints while providing relevant recommendations.

Activity-Based Learning (Suggested Activities in Class)/ Practical Based learning

- **Startup Simulation Games**: Use entrepreneurship simulation games where students create and manage virtual startups, making decisions related to product development, marketing, and finance.
- **Business Model Canvas Workshops**: Work in teams to create business models using the Business Model Canvas. This hands-on activity encourages creativity and critical thinking.
- **Pitch Competitions**: Participate / Organize pitch competitions where students present their innovative business ideas to a panel of judges. This exercise helps to refine their pitching skills and business concepts.
- **Entrepreneurial Guest Speakers**: Invite successful entrepreneurs and innovators to share their experiences and insights with the class to provide real-world perspectives.
- **Idea Generation Workshops**: Participate brainstorming sessions and idea generation workshops to develop innovative concepts and products.
- **Design Thinking Workshops**: Collaborate design thinking methods, including empathy mapping, prototyping, and testing. These workshops can help them approach problem-solving in a human-

- centered way.
- **Innovation Challenges**: Present innovation challenges where students must come up with creative solutions to real-world problems.
- **Business Plan Development**: Learn through the process of developing comprehensive business plans, covering aspects like market analysis, financial projections, and risk assessment.
- **Incubator Programs**: Contribute on incubator program where students can work on their startup ideas with mentorship and resources.
- **Prototyping and Minimum Viable Product (MVP) Development**: Create prototypes or MVPs of their innovative products or services, allowing them to test their ideas in the real world.

Activity-Based Learning (Suggested Activities in Class)/ Practical Based learning

- **Geospatial Data Collection Field Trips:** Plan field trips where students collect geospatial data using GPS devices, mobile apps, and other tools. This hands-on experience helps them understand data acquisition and its challenges.
 - **GIS Software Workshops:** Participate in workshops using popular GIS software like ArcGIS or QGIS. Students can learn how to create maps, perform spatial analyses, and work with real geospatial datasets.
- **Geospatial Data Visualization Projects:** Collaborate to create interactive maps and visualizations using online platforms like Mapbox or Leaflet. This encourages them to explore different ways of presenting geospatial data.
- **Spatial Analysis Case Studies:** Analyze real-world spatial problems and use GIS to find solutions. Work on projects related to urban planning, environmental monitoring, or disaster management.
- **GIS Modeling Projects:** Attend challenges to build geospatial models for predictive analysis. They can work on projects related to wildlife habitat modeling and use change prediction, or disease spread modeling.

Appendix A: List of Assessment Patterns

| S.NO | Pattern of Assessments | |
|------|---|--|
| 1 | Assignments | |
| 2 | Group Discussions | |
| 3 | Case Study / Caselets | |
| 4 | Practical-Orientation on Design Thinking | |
| 5 | Participatory & Industry-Integrated Learning | |
| 6 | Practical Activities / Problem Solving Exercises | |
| 7 | Class Presentations | |
| 8 | Analysis of Industry / Technical / Business Reports | |
| 9 | Reports on Industrial Visit | |
| 10 | Industrial / Social / Rural Projects | |
| 11 | Participation in external seminars / Workshops | |
| 12 | Any Other Academic Activity | |
| 13 | Online / Offline Quizzes | |

APPENDIX B: Outcome Based Education

Outcome-based education (OBE) is an educational theory that bases each part of an educational system around goals (outcomes). By the end of the educational experience each student should have achieved the goal. There is no specified style of teaching or assessment in OBE; instead classes, opportunities, and assessments should all help students achieve the specified outcomes.

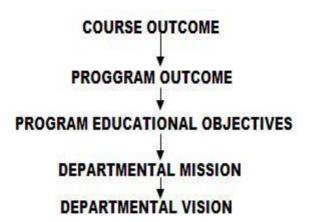

There are three educational Outcomes as defined by the National Board of Accreditation:

Program Educational Objectives: The Educational objectives of an engineering degree program are the statements that describe the expected achievements of graduate in their career and also in particular what the graduates are expected to perform and achieve during the first few years after graduation. [nbaindia.org]

Program Outcomes: What the student would demonstrate upon graduation. Graduate attributes are separately listed in Appendix C

Course Outcome: The specific outcome/s of each course/subject that is a part of the program curriculum. Each subject/course is expected to have a set of Course Outcomes

Mapping of Outcomes

APPENDIX C: The Graduate Attributes of NBA

Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Conduct investigations of complex problems: The problems that cannot be solved by straightforward application of knowledge, theories and techniques applicable to the engineering discipline that may not have a unique solution. For example, a design problem can be solved in many ways and lead to multiple possible solutions that require consideration of appropriate constraints/requirements not explicitly given in the problem statement (like: cost, power requirement, durability, product life, etc.) which need to be defined (modeled) within appropriate mathematical framework that often require use of modern computational concepts and tools.

Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

APPENDIX D: BLOOM'S TAXONOMY

Bloom's taxonomy is a classification system used to define and distinguish different levels of human cognition—i.e., thinking, learning, and understanding. Educators have typically used Bloom's taxonomy to inform or guide the development of assessments (tests and other evaluations of student learning), curriculum (units, lessons, projects, and other learning activities), and instructional methods such as questioning strategies.
